SAY *yes* TO PrEP

Pre-exposure prophylaxis, or **PrEP**, is a way for people who do not have HIV to prevent HIV infection by taking a pill once day. When taken consistently, PrEP has been shown to **reduce the risk of HIV infection in people who are at high risk by up to 92%**.

Post-exposure prophylaxis, or **PEP**, involves taking antiretroviral medicines as soon as possible after you may have been exposed to HIV, to try to reduce the chance of becoming HIV-positive.

**PrEP AND PEP ARE AVAILABLE IN YOUR AREA. CALL TO LEARN MORE.
